

AQUAVIA SPA

Creating Sensations
2024

Aquavia Spa, european leader in the manufacture of hot tubs and swimspas

Design, innovation and a full quality guarantee are three cornerstones of Aquavia Spa, a brand with more than 35 years of success and a commitment to in-house manufacturing.

At Aquavia Spa we conceptualise, design, produce and market hot tubs and swimspas for private and public use.

Our brand has become an international leader thanks to constant innovation, meticulous control and design focused on user experience.

Our values

Quality

Our quality policy is comprehensive and in-depth. It does not focus solely on the final product but on each and every one of the elements in the design, production, distribution and after-sales processes.

Innovation

Our R&D department is constantly improving its wide range of hot tubs with innovations aimed at improving the design and functionality of the product, maintaining a clear focus on the user experience and the efficiency of the units.

Design

We understand design to be the perfect blend of art and engineering, always with user experience as its ultimate goal. When designing our hot tubs, we apply the conclusions of aesthetic trend studies to choose shapes and colours and combine them with top-quality materials.

Empathy

Empathy, the ability to put ourselves in the place of the people who will use our hot tubs, is the driving force in constantly innovating our products, improving their efficiency, developing responsible sales strategies and providing rigorously committed after-sales services.

Exclusivity

Our flexibility and agility in design and production allow us to create hot tubs completely tailored to each customer and to each individual order. Each Aquavia hot tub and swimspa is exclusive because, for us, each customer is exclusive.

An extensive guarantee

We offer long-lasting guarantees, because the quality and reliability of our hot tubs makes it possible.

 15 years for frame

 10 years for acrylic

 2 years for components

A universe of well-being

A massage designed for each part of the body

Each of the positions in Aquavia Spa hot tubs has been design to perfectly conform to your body, so that every jet puts the perfect pressure on the right muscle, giving you a comfortable and healthy relaxing massage.

Types of Massage Jets

There are different types of jets, each having its own benefits. Every one of the jets installed in Aquavia Spa hot tubs and swimspas has a specific function. The same is true of the massage points, which have been meticulously studied to provide incredible sensations and the most exclusive treatments.

Water jets

Localised pressure micromassage
Perfect for those who love strong sensations, with powerful water jets that exert pressure on parts of the body for a deep massage.

Draining rotation massage
Let the impactful flows of water envelop you in a lipoactive body-sculpting massage.

Anti-stress rotation massage
Essential! This jet provides a pleasant, relaxing sensation thanks to the circular water motion.

Reflex foot massage
An indescribable massage. The best of reflexology translated into a hot tub. This jet undoubtedly provides a great moment of relaxation after a hard day, helping you sleep better and wake up with energy.

Neck Massage
One of the most comforting massages. A specific jet for the upper spine that helps relax the muscles in the area, providing great sensations of relief and well-being.

Relax Impact System
Disconnect! The bubbles produced by the Relax Impact System have a relaxing effect on the entire body, delighting everyone who tries it.

Engineering and Manufacturing

Features that differentiate us as an innovative hot tub and swimspa company, a leader in development and in-house manufacturing.

We design and manufacture our own hot tubs with European refinement

Despite the growing trend towards offshore production, Aquavia Spa has opted to continue producing all of our hot tubs and swimspas, as well as their components, in Cervera (70 km from Barcelona). That has made us one of the most important manufacturers in the hydromassage sector, and has helped us obtain quality certifications.

METALLIC
structure

The robust metal frame that extends the life of the hot tub

It is one of the keys to the durability of our hot tubs. This metal frame is treated against corrosion and supports the entire weight of the hot tub, making it robust enough to prevent any deformation. It has been stringently tested in humid environments and extreme temperatures, so it is durable, even when installed outdoors.

BCN
DESIGN

Design

Finishes offering extraordinary added value that put us at the forefront of hot tub design

Barcelona is one of the world's leading design cities. Its cosmopolitan nature and creative tradition have made it one of the world's leading trendsetters and a hub of innovation in Europe.

Aquavia Spa has become imbued with this spirit, creating its own style with creative engineers and innovative designers. Thanks to this creative vision, in line with the strategic approach of our management, we strive to make our hot tubs unique, with a character of their own and an exclusive design.

The light strip that changes everything

Pure Line Lighting changes the look of the hot tub, and with it, the aesthetics of the entire space in which it is installed. It is a polychromatic LED lighting system along the outer strip of some of the hot tubs in the Exclusive and Premium ranges.

This strip's lighting around the hot tub cabinet has the same colour as the Colour Sense chromotherapy system. In other words, Pure Line Lighting enhances the relaxing power of chromotherapy by flooding the entire space with colour and creating a magical atmosphere.

The Pure Line Lighting feature also enhances the appearance of the indoor or outdoor space where the hot tub is installed. It elevates the hydromassage tub and makes it the primary and essential element of the space.

The hot tub cabinet with no visible screws

Woodermax is a stylish and exclusive hot tub cabinet by Aquavia Spa, with a strip fastening system that totally eliminates screws and gives it unique aesthetics.

The finish of the Woodermax cabinet gives it great added value. It was also designed by our engineers to make it very easy and practical for one person to fit and remove each side of the hot tub in order to access it for maintenance. The cabinet consists of a high pressure laminate (HPL) panel, ensuring its long life and high resistance to all weather conditions.

The result: impeccable aesthetics, incredible quality and unbeatable practicality.

Hot tubs designed to offer high levels of performance and quality, all combined into a modern and striking design.

Aurora Cabinet

Experience more than just water, let its feel overwhelm your senses from start to finish.

New cabinet for the Premium range, Aurora.

Design

Organic lines that bring elegance and luminosity to your space.

360° experience

The soft material activates the feeling of well-being and invites you to submerge yourself in the water right away.

LED lighting system

Light intensity without needing to touch the screen, pressing directly from the exterior of the cabinet.

Aurora, an innovative, sustainable product that arouses the senses.

Water quality

Our commitment to health is strictly linked to impeccable water quality inside the hot tub

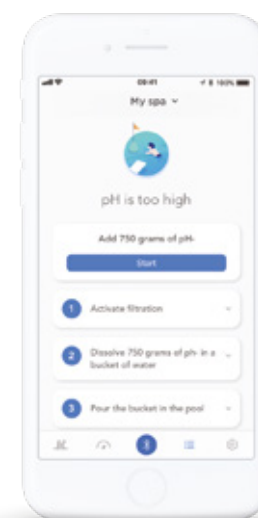

blue
connect plus

Enjoy your hot tub with total peace of mind

Blue Connect Plus analyses the water quality and indicates which chemicals are needed for your hot tub.

Control your hot tub from anywhere thanks to the hot tub's Internet-connected water analyser and its free Blue Connect Plus application.

Smart analyser for the hot tub. The solution for monitoring, taking care of, and enjoying your hot tub.

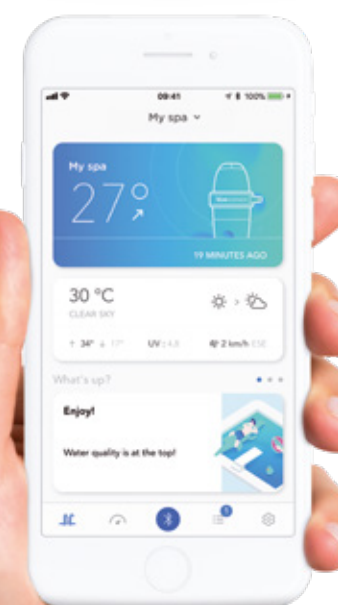

2-year warranty
(device and probe)

No subscription
necessary

Connection included
(Sigfox)

Plug and Play

Blue Connect Plus works with all types of hot tubs and only takes 3 minutes to install.

1. Download the App
2. Pair it with Blue Connect Plus
3. Install it in the hot tub
4. Enjoy!

Innovative, all-in-one sensor

It measures your hot tub's main parameters:

- Temperature
- pH
- Disinfectant level (ORP)
- Conductivity

24/7 assistant for your hot tub

- Receive automatic notifications on your mobile telephone.
- Save time and money thanks to the step-by-step guide.
- Remote monitoring any time, anywhere.

High-performance pressure filtration

With the High Performance Water Care system, the hot tub collects the water and introduces it into the filter at high pressure. The process ensures that the water's impurities are immediately retained in the filter, thus making filtration quicker and more efficient and optimising the quality of the water to a far greater degree than conventional filters. This also has a positive impact on maintenance needs and the service life of the filter.

ULTRAVIOLET TREATMENT UV

Say goodbye to a chlorine smell and eye irritation in the hot tub

Ultraviolet Treatment minimises the use of chemicals for disinfecting the water and always keeps the water in the hot tub clear and transparent, as well as being fresh and healthy. It is a disinfection system based on UV technology that uses an ultraviolet light to destroy the bacteria and other germs present in the water.

Ozone injection for perfect filtration

Clean Water is a simple and basic solution that requires no maintenance. It consists of introducing ozone (O₃) into the water via the hot tub's filtration system. Adding ozone helps neutralise deposits that are difficult to filter, in particular soaps, body oils and other substances that are tricky to remove from the hot tub's water.

Well-being

Hot tubs with details that turn wellness into an enveloping and complete sensation

It turns the hot tub into a relaxing chromotherapy centre

Colour Sense turns the hot tub into a genuine chromotherapy centre, offering wellness therapy based on the positive effects of colour on people's health and quality of life. As a result, Aquavia Spa has equipped some of its hot tub models with a lighting system that uses multiple LED spotlights to project the chosen colour or a sequence of lights with a range of alternating colours (direct switching or colour transitions), with the aim of creating a connection between the colour, your mind and your body.

Aromatherapy adds pleasant fragrances to the hot tub's air bubbles, enhancing the hydromassage experience and making it more holistic. Unlike conventional oils that are mixed with the water in the hot tub and make it dirty, Aromatherapy does not generate any waste as the aroma is released entirely into the air.

Imagine being able to control your hot tub from your mobile phone, from work or when you are on your way home, so that everything is ready when you arrive. This is possible thanks to the Wi-Fi Touch Panel, the remote control and programming technology that is added to the BALBOA® control system featured on all of our hot tubs.

The Relax Impact System is the perfect complement for the overall and comprehensive massages that Aquavia Spa aims to achieve with its hot tubs. It consists of an additional hot air massage pump, channelled via injectors located beneath the user's legs and buttocks.

Listen to your music while you relax in your hot tub, thanks to wireless sound equipment connected remotely to your mobile device via Bluetooth. The Surround Bluetooth Audio system lets you easily and conveniently enjoy the highest quality sound (with 4 speakers and a subwoofer) from your mobile phone or tablet (or any other Bluetooth enabled device).

Efficiency and the Environment

The efficient insulation system for your hot tub

All Aquavia Spa hot tubs have the option of including the EcoSpa insulation system, composed of several layers of high-density polyurethane foam, which allows you to maintain the water temperature with energy savings of 69%, even in extreme temperatures of -15°C.

The results of the tests conducted by the R&D&I team at Aquavia Spa have confirmed the significant thermal protection provided by EcoSpa, especially designed for areas with extremely cold climates but also, by extension, for any hot tub installed outdoors, or for users who want to optimise their energy consumption.

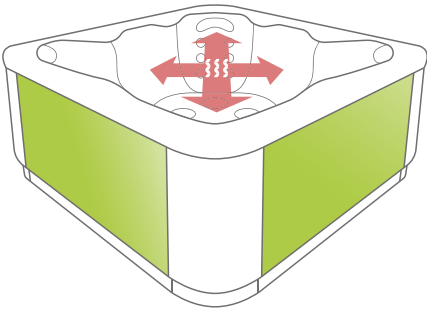

Maintain the water at 38°

AMBIENT TEMPERATURE	CONSUMPTION	INSULATION SYSTEM	% SAVING
+20	6,48 kWh	Ecospa	67%
+20	19,52 kWh	-	0%

Nordic Insulation System: hot tub insulation for the coldest environments

The Nordic Insulation System is an insulation system that helps improve the energy efficiency of the hot tub. Designed to be used in countries with extremely cold temperatures.

The Nordic Insulation System is a 10 mm five-layer material located on the sides and curves of the hot tub's cabinet, creating an insulating air chamber inside it. The 10 mm insulating material is composed of 5 layers.

Maintain the water at 38°

AMBIENT TEMPERATURE	CONSUMPTION	INSULATION SYSTEM	% SAVING
-15	11,81 kWh	Nordic Insulation	80%
-15	17,84 kWh	Ecospa	69%
-15	58,40 kWh	-	0%

Smart technology

Stand-alone, silent and affordable filtration at any time of day

There's no need to wait until night to filter your hot tub's water. Silent Pump is the quietest filtration system available on the market, with the lowest energy consumption.

Aquavia Spa Control

Immerse yourself in the technology of our control panels and optimise your spa's performance. Our smart panels make it easy to adjust settings and maximise energy efficiency. Monitor the temperature of your spa when you are away from home.

Discover REST MODE

Intelligent mode that only heats the spa water during filtration cycles. The heating element is not constantly activated and reduces the hours of energy consumption. All our spas have REST MODE and its configuration is simple and intuitive.

Water temperature and quality when covered

This is not just any hot tub cover. The Energy Saving Cover is the result of successive improvements to the covers of our hot tubs, to reduce heat loss and water evaporation to a minimum. The cover is double reinforced, with a maximum thickness of 130 mm and is made from materials which, when combined with the EcoSpa feature, reduce energy consumption by up to 67% compared to hot tubs without the Energy Saving Cover..

The new textile material of our spa covers exceeds the standards: it combines luxury and soft touch comfort, with superior UV protection and resistance. Improves thermal insulation, promoting the energy efficiency of the product. A change to the exclusive and premium range that further enhances the beauty and performance of hot tubs.

Heat Pump

Our heat pump meets the savings expectations you are looking for. It works in extremely cold conditions, withstanding temperatures down to -20°C, while operating silently, almost imperceptibly. This new accessory not only heats your spa water faster, but also helps you maintain the temperature efficiently. A smart choice for everyone

ENERGY EFFICIENCY
70% SAVINGS

Why our pump?

NEW

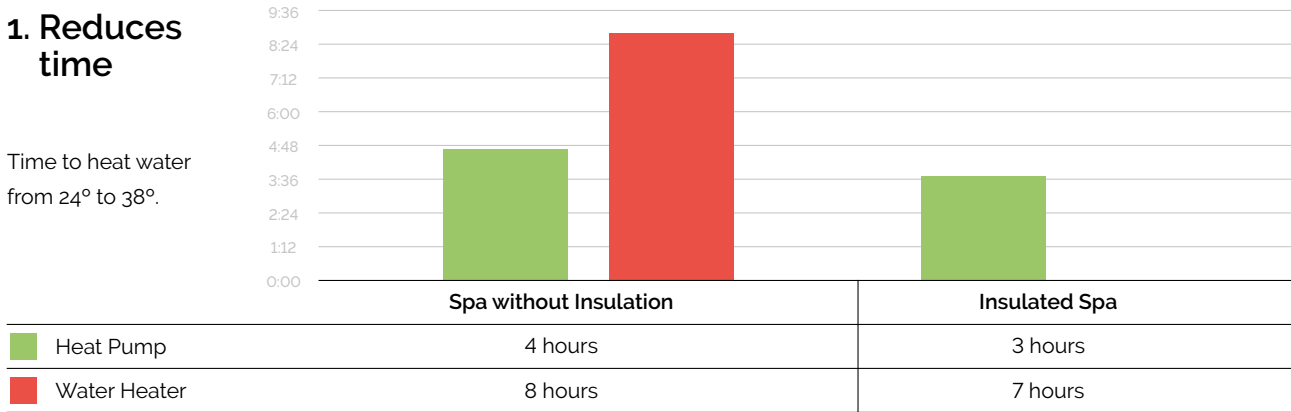

Advantages

- Full control via **Touch Panel 3**.
- Heater and pump work together. The heater activates automatically if the outside temperature is extreme (-20°).
- Integrated installation in your spa with maximum guarantees.

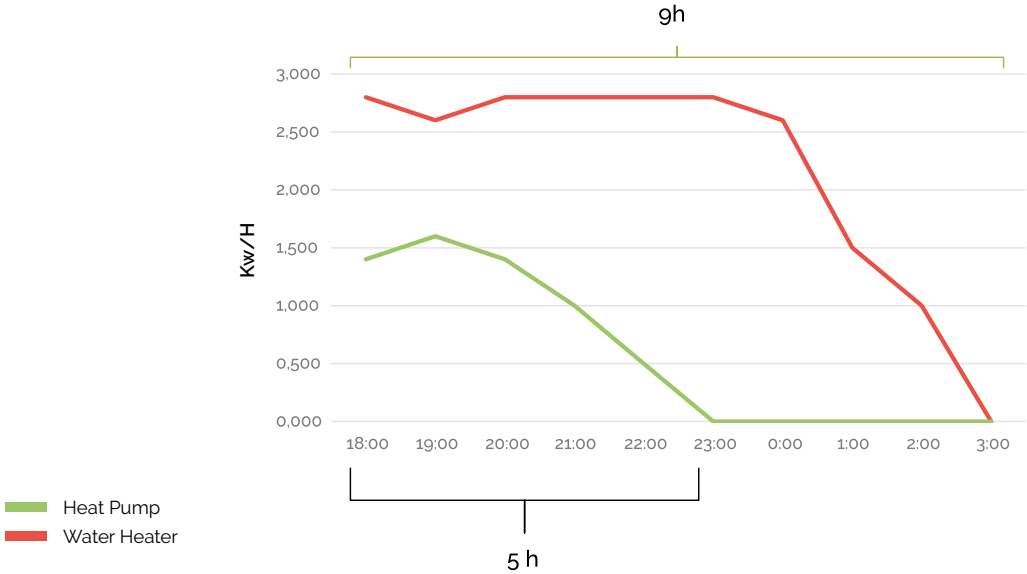

1. Reduces time

Time to heat water from 24° to 38°.

72% Saves time and energy
Reduces the waiting time to heat the water, accelerating the process from **9 to 5hrs***.

2. Saves on electricity consumption

* Water heating from 24° to 38° with a room temperature of 24°.

AN EXTENSIVE RANGE

Hot tubs and swimspas

Getting into a hot tub should be a fascinating experience and, at Aquavia Spa we are fully committed to providing all of the magic required in those moments of relaxation, complete well-being and absolute calm and serenity. Ultimately, what we design are moments full of emotion.

And we believe that, with our hot tubs and swimspas, we are responsible for creating magical worlds where time stops, enticing you to enjoy yourself, with nothing more challenging than simply being happy. Is there a greater purpose?

SWIMSPAS

Physical exercise and quality of life in the water

The Swimspa is a totally ground-breaking concept, a fusion of wellness and fitness, combining the usual activities of a hydromassage tub with those of a swimming pool.

Aquavia Spa's Swimspa models are not only designed for doing counter-current swimming, but also for other activities and physical exercises in the swimming pool, popularly known as aqua gym or aqua fitness.

Opting for a Swimspa is an excellent choice for your wellness and quality of life.
